SUMMER 2020

The Crucial Role of Fort George in 1776

By Russell Bellico

In 1776 the American army experienced a tumultuous year of dramatic failures and measured successes in the Northern Theater. Fort George would play a major role as a vital supply hub, a boat-building establishment, as the largest smallpox hospital of the entire war, and for a time, the headquarters of the commander of the Northern Department, Major General Philip Schuyler. The importance of the fort was largely due to its central location on the critical water route of the Hudson River—Lake George—Lake Champlain corridor. With the American army still in Canada in January 1776, following a failed attack on Quebec City, Fort George continued as a key supply transshipment center and a bivouac area for reinforcements.

In January 1776, Major General Philip Schuyler began making arrangements for additional carpenters to travel to Fort George to build bateaux. On January 22 Schuyler wrote to John Hancock that “Shipwrights be immediately sent from New York and Philadelphia to build Batteaus,” which would be constructed “at Fort George.”¹ In late March Schuyler informed George Washington that cannons destined for the Northern Theater were “on their way to Fort George,” and “one hundred new Batteaus were finished at Fort George” but “without pitch & oakham,” so only 35 were ready for service.² On April 27 Schuyler notified George Washington that he had to exceed the congressional limit of only 100 bateaux because of a shortage of vessels to transport reinforcements, artillery, and provisions to the army in Canada. He began construction of additional bateaux “for the conveyance of fifty men” each; in two weeks in April, over 1,300 American troops passed through Fort

George.³ The bateaux were built under the direction of Harmanus Schuyler (no direct kinship to the general), the deputy quartermaster general, who would be sent to Skenesborough (Whitehall) in April to begin preparations for the construction of larger vessels on Lake Champlain.

There were other large vessels on Lake George, including a large pettiauger built for Samuel Deall in 1769, probably by John Sparding at the Ticonderoga landing on Lake George. The vessel had been employed by Colonel Henry Knox in 1775 to transport cannons on Lake George on their long trek to Boston. This may be the same vessel or another that Colonel Jeduthan Baldwin, the chief engineer from a Massachusetts regiment, noted on May 5, 1776, in his journal: “got the can[n]on on Bo[a]rd the Sloop with the artillery Stores,” along with the baggage of “the carpenters & Smiths.”⁴

On February 15, following a recommendation from Schuyler, the Continental Congress had approved a plan to send a committee to Canada to present American ideas about Canada’s political future and to gain the support of the Canadians for the war. The three-man committee, granted far-reaching powers by Congress, included Benjamin Franklin, Samuel Chase, and Charles Carroll. Schuyler met the commissioners at the Albany landing on April 7. The delegation stayed in Schuyler’s homes in Albany and Saratoga (now Schuylerville), but on April 11 Schuyler pressed ahead to Fort George, accompanied by Major General John Thomas, the new field commander of the American army in Canada. From April 12 to June 9, 1776, Fort George served as Schuyler’s headquarters. After receiving word that Lake George was free of ice for a voyage north, the commissioners

Major General Philip Schuyler, commander of the Northern Department, established his headquarters at Fort George during the spring of 1776. (New York State Library)

arrived at Fort George on the afternoon of April 18. Charles Carroll found the fort in “ruinous” condition with a barracks occupying “almost the whole space between the walls” of the fort’s bastion.⁵ (Carroll also used the word “ruinous” to describe Fort Ticonderoga.)

While the commissioners were at the fort, Schuyler was “seized” by “a vile ague [fever]” and received “a number of doses” of “Peruvian bark,” extracted from trees native to the South American Andes, administered by Benjamin Franklin.⁶ Schuyler apparently recovered sufficiently the following day, April 19, to accompany the commissioners on their passage across the lake to Ticonderoga.

The Crucial Role of Fort George in 1776

continued from page 1

Benjamin Franklin, one of the three commissioners to Canada, stayed at Fort George In April 1776. (Library of Congress)

While Charles Carroll only mentions one barracks at Fort George in 1776, there are a few original sources that indicate some structures located near the lake may have served as barracks during the Revolution. In addition to observing the six-room “brick barracks” within the bastion walls of Fort George, on April 7 Chaplain Ammi Robbins from Norfolk, Connecticut, recorded “Barracks built for the accommodations of several regiments of soldiers,” implying that the barracks were somewhere near the wharf.⁷ At night Robbins held services “in the large new barrack; great numbers attended.”⁸ In 1800 Abigail May, one of the first tourists to record their impressions of Lake George, stayed in “a one story building” on the shore, which had the appearance of a jail.⁹ In 1819 Benjamin Silliman, the renowned professor of science from Yale College, wrote that “on the very shore, we observe one of the old barracks, formerly belonging to the fort, now exhibiting a tavern sign.”¹⁰ Silliman based his observation on a letter from Judge James Kent, who visited Lake George in 1795 and “lodged at a dismal old house which had been a military barrack on the

shore below Fort George.”¹¹ The drawing entitled “Lake George from Fort George” by Silliman’s brother-in-law, Daniel Wadsworth, clearly shows the tavern sign. In August of 1830, historian Jared Sparks visited Fort George, drawing a map of the area. Sparks identified a “foundation still seen of a very large warehouse, doubtless used in the Revolution,” located on the lakeshore just east of West Brook.¹² Presently, there is not sufficient information to firmly establish the nature of this structure.

A reversal of fortune awaited the American army in Canada during the spring of 1776. On May 2 Major General John Thomas, who had bivouacked with his reinforcements at Fort George a few weeks earlier, reached Quebec only to find nearly half of the army infected with smallpox. Before preparing a careful plan of withdrawal, the Americans were forced into a haphazard, desperate retreat due to the arrival of fresh troops from England. Thomas, who had adamantly opposed inoculation for smallpox, succumbed to the disease himself in a few weeks. The American army, devastated by smallpox and dysentery, occupied Isle-aux-Noix in the Richelieu River, north of Lake Champlain. Dr. Lewis Beebe from Sheffield, Massachusetts, recounted the horrible scene on the island where many of the sick “could not see, speak, or walk... two had large maggots... Crawl out of their ears.”¹³ Major General Horatio Gates, noted that “Everything about this Army is infected with the pestilence” and thus established a “General Hospital” at Fort George “where there are now between two and three thousand sick.”¹⁴

The smallpox disaster in Canada was related to self-administered inoculations, which spread the disease to healthy troops. Benjamin Franklin and Benedict Arnold favored inoculation of troops, but with the precaution of quarantine. The creation of the hospital at Fort George by Gates was an effort to isolate all the smallpox patients to one post. Learning that a company of Rhode Island ship carpenters had been inoculated in Williamstown, Massachusetts, Brigadier General David

President's Welcome

By Lyn Karig Hohmann

Welcome to this edition of the Fort George Post! We hope you and your families are well and staying safe during these trying times. COVID-19 has affected so much of what we all do and the Alliance has not been free of its effects. The Board has relied on phone calls and emails to do our work instead of our face to face meetings. But work is getting done! You will see in this edition that we continue to work towards the VIC displays. Fund raising has not been as productive as we had wished (a victim of COVID), but we are sufficiently funded to have a solid presentation for our opening and we are continuing seeking funds. As to the VIC itself, ground has been broken on the Lake George Park Commission building (the VIC is the ground floor) and construction is on its way. We have not been given a time frame for completion, but will let you know when we have heard. Additionally, we have been working with NYS DEC to update our Memorandum of Understanding to include the work for the VIC. The pieces are falling into place!

The annual meeting will be on September 5th, but we are not sure what form it will take. NYS DEC cannot guarantee the availability of the park and other sites have restrictions on groups. We may end up meeting by Zoom, which may allow additional people who cannot travel to attend. We will update you by email. ■

The Crucial Role of Fort George in 1776

continued from page 2

Waterbury, supervising the construction of vessels in Skenesborough, ordered that “the men should be discharged.”¹⁵ Waterbury added that “we don’t intend to let any one come into this place that lately had the smallpox as we have got it out of this place and Ticonderoga.”¹⁶

The hospital at Fort George, the largest one in North America at the time, was a scene of unimaginable suffering. (For a fuller description of the Fort George hospital see the Winter 2012 newsletter.) The sick were spread across the area that today encompasses the Battlefield Park and Fort William Henry, and were housed in open-air “sheds,” in “temporary barracks” and in a few adjacent farm houses.¹⁷ Dr. Benjamin Rush, chairman of the medical committee of the Continental Congress in 1776, later wrote “that sick men recover health sooner or better in sheds, huts, and barns, exposed occasionally to the wind and sometimes rain.”¹⁸ Chaplain Ebenezer David from Rhode Island described the patients at the Fort George hospitals as “Skeletons” in “large sheds,” and felt an “anguish what neither Tongue nor Pen can describe.”¹⁹ Similarly, Chaplain Ammi Robbins “visited the west hospital [perhaps on the site of the ruins of Fort William Henry] so far as I could stand it,” but returned the next day to pray with the men in the “long hospital.”²⁰ Robbins concluded that “never was such a portrait of human misery as in these hospitals.”²¹

The tragic situation at the Fort George hospital was exacerbated by an absence of medication for the patients. Dr. Samuel Stringer, the medical director of the Northern Department, wrote to General Gates from Fort George on July 24, regarding the “shocking circumstances” of no medicines: “men dying for want of assistance.”²² Although opium was

used by doctors at the time, many of the medicines of this period were derived from bark and herbs. Sometimes medications might have done more harm than good. Dr. Samuel Merrick from Massachusetts, assigned to the Lake Champlain forts in 1776, had his medicine chest filled with a wide range of medical remedies: powdered rhei (rhubarb to treat diarrhea), jalap (cathartic/laxative), elixir of camphor (counterirritant), cathartic salts (purgative), artemisia (European wormwood), and tartar emetic (vomiting inducement).²³

At the end of July, Dr. Stringer traveled to New York City to obtain medicines for the Fort George hospital. He disappeared for more than a month and did not succeed in acquiring medicines. The real hero of the Fort George hospital was Dr. Jonathan Potts. (For more information on Dr. Potts see the Spring 2016 newsletter.) By the end of August 1776, the worst was over. As director of the hospital, he saved the lives of hundreds and hundreds of soldiers – a towering achievement, given the circumstances. In January 1777 Dr. Potts replaced Stringer as the medical director of the Northern Department. (In 1800 Dr. Stringer would treat one of the first tourists to Lake George, Abigail May. Ten days after returning to Boston, May died following opium treatments for pain in her hand provided by Dr. Stringer in Albany.²⁴)

The aftermath of the deadly smallpox epidemic in 1776 is still with us today at Lake George. While excavating during a construction project at the intersection of Courtland and Mohican streets in February 2019, crews uncovered the remains of several skeletons. Archaeologists from

continued from page 3

state agencies and volunteers, including Dr. Lyn Hohmann, subsequently sifted through a huge volume of soil at the site and discovered the remains of about 30 individuals, along with eighteenth-century uniform buttons, buckles, etc. One of the uniform buttons has been identified as that of the First Pennsylvania Battalion. This unit would have been involved in the turbulent retreat from Canada in the spring of 1776, and more than 100 of their soldiers became patients at the Fort George hospital.

The discovery of human remains at this site in Lake George is not completely surprising; local historians had identified the same location as the site of an earlier excavation of “approximately 3-4 skeletons,” and in 2001 a human skull found near Mohican Street was identified by archaeologist Dr. David Starbuck as possibly a soldier from the Revolutionary War.²⁵ The graveyard may be connected to the “burying place” that Dr. Lewis Beebe observed on August 28, 1776, where he “counted upwards of 300 graves” dug “in about 5 weeks.”²⁶ The 1776 cemetery included the gravesite of Brigadier General Baron Frederick de Woedthe, a former Prussian officer in the American army, who died at the Fort George hospital on July 28, 1776. General Gates

notified Congress that de Woedthe “was buried with the honours due his rank.”²⁷

The Lake George Battlefield Park would be the proper reburial site for these fallen soldiers who lost their lives in pursuit of independence for the American colonies. Given the sacrifices of the troops at Lake George over the course of two wars, the Battlefield Park is truly hallowed ground. ■

Painting "Fort George Bastion"

By Tim Cordell

The Alliance is excited to receive the painting of Fort George Bastion from Tim Cordell. We were unaware that he was preparing this beautiful painting and was donating it to the VIC! Tim here explains his story of the painting. Thank you, Tim, for this fantastic donation!

As a lifelong history student and enthusiast, I have gone several times to Boston to tour their marvelous historic sites. I remember once in the 1980s climbing up Bunker Hill (Breed's Hill) and looking down the slope, hoping to get a sense of the view colonial troops would have had during the famous battle there in June 1775. Instead, I looked down upon a bustling 20th Century city. Try as I might, I could not get a sense of what a patriot soldier saw during that crucial battle.

At Lake George Battlefield Park, I can get that sense of an authentic 18th Century-view—what the troops saw--whenever I make one of my frequent visits to ponder the ruins of Fort George. It recently inspired me to do the painting of the bastion which accompanies this article.

To create the image you see represented in the picture, I took reference photos and studied the scene in depth in early October 2019. The painting is intended to provide a feel for the color and light of an early October morning, such as what Amherst may have experienced when he inspected the fort in October 1760 or what royalists fleeing their loss at Saratoga saw upon taking refuge here in October 1777.

A personal postscript: I also researched old photos and post cards of the bastion to furnish me as much of a holistic perspective of the grounds as possible. In the process I found on-line a postcard from July 1946—the month and year I was born!--showing a photo of the bastion taken from the same spot and at the same time of day (from the location of shadows) as what I photographed more than 70 years later. In that postcard is a large lone pine tree with a sign that reads "Fort George built by order of General Amherst summer of 1759". Today that tree is the stump in the foreground of my painting. I like to think of it as my birthday stump! ■

Tim Cordell is a historian-artist based in Queensbury, NY whose paintings have appeared in books by Russell Bellico, Joseph Zarzynski, and David Starbuck, among others.

Board Member Thumbnail: Russell Bellico

Ernest Haas (left), noted painter of historic ships, and Russell Bellico (right) in front of the painting by Mr. Haas, Gen. Jeffery Amherst's Encampment (Fort George) Summer 1759, commissioned by the Alliance.

Vice President John DiNuzzo suggested members might appreciate learning more about the trustees who are guiding the Alliance. In this issue we are highlighting Dr. Russell Bellico:

Russell Bellico is a professor emeritus at Westfield State University and former chairman of the Department of Economics and Business Management. He is the author of *Empires in the Mountains: French and Indian War Campaigns and Forts in the Lake Champlain, Lake George, and Hudson River Corridor*, *Sails and Steam in the Mountains: A Maritime and Military History of Lake George and Lake Champlain*, *Chronicles of Lake George*, *Chronicles of Lake Champlain*, editor of *Life on a Canal Boat*, as well as the author of two dozen magazine articles on maritime history. He was on the board of Bateaux Below, Inc., and was a member of the archaeological team that documented the radeau *Land Tortoise* (a National Historic Landmark), serving as the historian and underwater photographer.

Alliance members have benefited from the excellent articles about the park that Russ has contributed over the years. He has also been a driving force for obtaining a visitors' interpretive center (VIC) for the park and has contributed significantly with the historical research for the new VIC. ■

David Starbuck publishes book on park archaeology!

For those interested in the archaeology of Lake George Battlefield Park, David Starbuck, who did significant archaeology in the park, has recently published an excellent summary of his work, "Archaeology in the Lake George Battlefield Park," filled with beautiful pictures of the site and the artifacts. The Alliance will be using the information in his book to assist us in developing displays for the Visitors Interpretive Center! David can be reached at dstarbuck@plymouth.edu for those interested in obtaining a copy of this work.

Honoring the Unknown Soldiers of the Battle of Lake George

Due to restrictions of gatherings, we were unable to hold our usual public event honoring the Unknown Soldiers. However, the Board decided we should still hold an appropriate event to remember these men as representative of all the unnamed soldiers buried in unknown graves in our area. We were joined by the Lake George Fire Department Honor Guard and the Lake George American Legion Post 374 who placed poppies. Dr. Hohmann gave a short introduction and Fran Coccozza read the Soldier's Prayer. We had hoped to hold a larger public event at the annual meeting in September, near the date of the actual battle. ■

Rick Conley preparing models for the VIC!

After months of searching for the right person, the Alliance was excited to find an expert model builder to create models of our forts for the Visitors' Interpretive Center (VIC) right in our own back yard, so to speak. Rick's wife had posted a model of a canal boat on the Facebook site, "Things you remember if you grew up in Hudson Falls" that came to our attention. After we reached out to him and explained what we were trying to do for the VIC, we were excited when he agreed to work on our needed models. Rick is a model railroader and a former history teacher from Hudson Falls and is well known for his skill in model building including creating models for the Chapman Museum. After Russ Bellico provided detailed literature and we had a site visit to the actual fort sites, Rick has started on Fort George. Once completed, Rick will model the stockade fort. We look forward to these new additions for the VIC. ■

Model Barracks of Fort George Image by Rick Conley

First Pennsylvania Battalion Coat Ready for the VIC

Russ Bellico's excellent article about the crucial role of Fort George during 1776 references the Revolutionary War cemetery on Courtland Street that was inadvertently disturbed in February 2019. Since that time, rescue archaeology has been ongoing under the direction of Lisa Anderson from the NYS Museum and Charles Vandrei of the NYS DEC. While there has been little found that helps to identify these patriots, one soldier was buried in his uniform, a soldier from the First Pennsylvania Battalion. Buttons from this uniform were found with his remains. This find helped date this site as a cemetery related to the hospital for the Northern Campaign from 1776. Why this soldier was buried in his uniform is conjecture as most ill soldiers would not be in uniforms while in hospital. Perhaps he died on route or as he arrived at the military hospital.

To honor this soldier and those others from this cemetery, the Alliance commissioned Rob Frasier, lead guide at Fort William Henry, reenactor and well-known period tailor, to create the coat of this soldier for display in the new Lake George Battlefield Park Visitors Interpretive Center (VIC). Other pieces of the complete uniform are under construction and should be ready by the time the VIC opens. ■

Outline of the Stockaded Fort Identified?

In one of those serendipitous events, after the abbreviated Memorial Day wreath laying, Lyn Hohmann wandered over to the site of the stockaded fort, wanting to see what information could be collected for that planned fort model. With low spring growth, looking to the north, a previously unnoticed rise in a diamond shape was readily apparent. It appeared to be consistent with a bastion shown on 1759 maps of this fort. Using a copy of the "Plan of the Encampment of the Army at Lake George, 1759," approximate measurements and orientation of the fort were calculated, allowing for an expected margin of error. In the field, they were able to approximate the outline of the fort and found it consistent with identifiable ground features. In Russell Bellico's book, **Empires in the Mountains**, there is a quote from Samuel Warner describing the fort as "fourteen squares or turns...made with wood and stone..." (p, 184) A period picture of the fort in the document, "A Perspective View of Lake George" (1759) shows the logs to be laid horizontally, not vertically. This may suggest that there was a stone foundation to the fort walls, consistent with current findings. Of interest was that the northwest exterior wall was almost contiguous with what has been called the officers' barracks. An interesting feature of that building was a gun platform in its middle, found during archaeological studies in 2000. Given the closeness of the exterior of the fort to that feature and its sighting to the area of the colonial wharf, it could be conjectured that a gun was placed there to protect the area of the wharf. Further studies will be undertaken with the cooperation of NYS DEC including flagging the outline of the fort during the fall. ■
